SUMMARY

I am a Computer Science graduate with hands-on experience in **software configuration, development, testing, and portal integration**. Skilled in writing clean and maintainable code, debugging, and system integration across various technologies including **.NET, Go, Python, AL, and JavaScript**. Adept at **requirements gathering, documentation, and change management** while working in Agile teams. Strong communicator with the ability to collaborate across functions and deliver high-quality, scalable solutions.

CORE COMPETENCIES

- **Software Configuration:** Configure software, perform systems testing, document faults, and implement resolutions.
- **Development:** Write clean and maintainable code across different stacks; extend and debug existing services.
- **Testing:** Develop unit and integration tests, ensuring high coverage and reliability.
- **Patterns & Practices:** Apply coding standards, error handling, source control (Git), and avoid technical debt.
- **System Integration & Build:** Produce builds, execute integration tests, and report issues/risks.
- **Requirements Definition:** Assist in eliciting, documenting, and managing requirements with change control compliance.
- **Professional Competencies:** Team collaboration, effective communication, time management, and adherence to organizational security practices.

TECHNICAL SKILLS

- **Languages & Frameworks:** C#, .NET, AL (Business Central), Go, Python, TypeScript/JavaScript, React
- **Databases:** PostgreSQL, SQL Server (MSSQL), MySQL
- **ERP & Platforms:** Microsoft Dynamics 365 Business Central
- **DevOps & Tools:** Git, Docker, Windows/Linux, Postman, VS Code, Microsoft Visual Studio
- **Testing:** xUnit, NUnit, Integration Testing
- **Concepts:** REST APIs, GraphQL APIs, OOP, Agile Methodology

EXPERIENCE

The Jitu | Software Engineer Intern Nyeri, Kenya | 1st May 2023 – 27th July 2023

- Configured software and environments while participating in Agile sprints (daily stand-ups, sprint reviews).
- Debugged and resolved issues using version control, GDB, and detailed documentation.
- Collaborated with cross-functional teams to implement new features and enhance system functionality.

- Designed, developed, and maintained solutions using AL (Application Language) within the Microsoft Dynamics 365 Business Central ecosystem.
- Conducted system upgrades to ensure compatibility with the latest versions of Microsoft Dynamics, minimizing downtime and enhancing system performance.
- Designed, developed and maintained Staff Portals using .NET framework.
- Integrated third-party portals with Microsoft Dynamics 365 using SOAP and ODATA to streamline business workflows and improve data synchronization.
- Documented processes, best practices and solutions to support knowledge sharing and improve project efficiency.

EDUCATION

Dedan Kimathi University of Technology, Nyeri, Kenya — *Bachelors*, JULY 2020 - APRIL 2024, Computer Science.

Kenya Certificate of Secondary Education / Kabianga School 2016-2019

Kenya Certificate of Primary Education / Kibereisit Primary School 2006- 2015

PROJECTS

Startup Success Prediction

- Built a machine learning model using the **Decision Tree Algorithm** to predict startup success or failure.
- Processed and analyzed historical startup data to improve prediction accuracy.
- Developed and deployed the model using **Python, Pandas, Scikit-learn**, and **Jupyter Notebook**.

Student Management ERP System Upgrade

- Among the team for upgrade of **KCA Student Management ERP System** from **Microsoft Dynamics NAV 2017** to **Business Central Cloud**.
- Ensured a seamless data migration process while improving system performance and scalability.
- Worked with **AL (Application Language)** and **Microsoft Dynamics REST APIs** to enhance functionality.

KCA Portal Integration

- Integrated **KCA Portal** with **Business Central REST API**, enabling seamless access to the upgraded **Student Management ERP System**.
- Developed API endpoints utilizing MVC in .NET to facilitate secure data exchange between the portal and ERP system.
- Optimized integration for real-time data retrieval, improving user experience and operational efficiency.

Performance Management Project (ERP Module)

- **Lead the team in designing, gathering requirements, implementing and training the performance module.**
- **Offering support and Maintenance**
- **Integrated with the staff portal for employees to perform their appraisals and send them to their respective supervisors.**

Recruitment Module.

- **Became part of the team that implemented the recruitment module for Vilcom to help in handling their jobs advertisements and recruitment.**
- **Offering support and Maintenance.**
- **Integrated with the recruitment portal for applicants to apply for new vacancies and submit their applications.**

Vilcom Portal

- **Developed additional features like Employee Qualifications in the existing Portal.**
- **Offering support and Maintenance for the staff Portal.**
- **Ensuring efficient integration between the Portal and the ERP system.**

Vilcom Recruitment Portal.

- **Became part of the development team for Vilcom Recruitment portal.**
- **Took part in integrating it with the ERP recruitment Module.**

Pass Staff Portal.

- **Lead the development of employee self-service portal**
- **Integration of the staff portal with the ERP using SOAP and ODATA Webservice**

KidWave (Ongoing Personal Project)

- **A platform like TikTok but meant for Kids**
- **Implemented with React native for front end and Golang for backend**
